

BEYOND THE EXPECTED™

## Sx3100 EXCLUSIVE FEATURES

### Positive Position 3-Point Control

Allows for greater control of rear- and mid-mounted attachments by allowing the operator to set attachments precisely where needed; it's big tractor performance in a smaller tractor package.

### Open Operator Station

The wide, walk-through operator station makes it easy to enter and exit the tractor. All controls are located in close proximity to the operator, making the tractor easy to operate. A high-back seat with armrests ensures comfort even during a long workday. The operator station is also ISO-mounted to reduce vibration and operator fatigue.

### Drive-Over Select Cut System™ Deck

The Sx3100's exclusive 60" Drive-Over Select Cut System™ deck has two powerful advantages – quick and easy installation and an unmatched professional-quality cut. Installation takes only minutes with just a few simple steps and adjustments. The fabricated mower deck features an adjustable cutting edge and full float height control for a clean cut on any grass type or condition. Reinforced spindles and a commercial drive system provide professional-level quality, durability and longevity. Also backhoe subframe compatible for more versatility.

### Powerful Clean-Burning 31.2 HP\* Diesel Engine

The Sx3100 engine is a 3-cylinder liquid-cooled diesel engine with a higher torque reserve than competitive indirect diesel engines to give the operator more power to tackle any job. The robust design of the power plant also reduces vibration and noise for improved operator comfort. Operator presence control (OPC) and key-stop round out this powerful package.

### Fully Hydraulic Power Steering

Delivers power from the hydraulic valve body to the front steering link through hydraulic lines. Makes for less steering wheel kickback in rough terrain, with or without loader, for easier, safer operation. It also lowers the cost for owners throughout the life of the tractor by having less moving parts.

### Front-Mounted Worklights

An exclusive Cub Cadet Yanmar feature allows for brighter and safer operation of all front-mounted attachments for dusk-to-dawn operations.

### Actuated Hydraulic PTO Engagement

The easy-to-engage electric PTO switch actuates a servo, allowing hydraulic fluid to enter the PTO clutch slowly. This results in smoother engagement of the attachment and extends the life of the system, lowering the cost of ownership over the life of the tractor. This feature is

Ideal for customers transitioning from a lawn or garden tractor and helps them become comfortable with the operation of a PTO.
